Education

University of South Florida, College of Engineering Tampa, FL
Bachelor of Science in Computer Science; GPA: 3.56/4.00 *Graduation: December 2026*

- Relevant Coursework: Data Structures & Algorithms, Database Systems, Computer Architecture, Operating Systems

Technical Skills

Languages: Java, Python, SQL, Go, TypeScript, JavaScript, C/C++
Frameworks & Data: Spring Boot, React, Node.js, PostgreSQL, Redis, REST APIs, WebSockets
Cloud & Tools: AWS (EC2, S3), GCP, Docker, Linux/Unix, Git, GitHub Actions (CI/CD), Maven, k6
AI & Developer Tools: Claude, Claude API, LLM integration

Experience

Software Engineering Intern May 2026 – August 2026
Maya Software Studio (Mayasoft subsidiary), fintech services for banking clients

- Proposed and built a rule-based merchant risk-scoring service for bank lending decisions and integrated a teammate's ML model into it; now in production, designed for 15,000+ merchants across 35,000+ terminals
- Cut risk-scoring computation from 106 s to 3.3 s by replacing per-merchant SQL queries with a single set-based aggregation, eliminating repeated database scans
- Developed Java/Spring Boot REST APIs serving risk scores and their explanations, achieving 7 ms P95 read latency and 50 ms P95 write latency in load tests

Software Engineer February 2023 – September 2024
Mayasoft, MARTA SoftPOS platform enabling Android phones to accept contactless Visa/Mastercard payments

- Built a transactions dashboard (Spring Boot APIs, React UI) that replaced manual Excel reporting, giving operations staff real-time visibility into 20,000+ daily transactions and tools to investigate and reconcile disputes
- Owned merchant onboarding end to end, building document-upload and identity-verification workflows (Spring Boot, React, AWS S3, PostgreSQL) with validation, state tracking, and audit history; reduced manual review by 40%

Projects

JobRadar – AI-Powered Job Discovery Platform | GitHub | *Python, PostgreSQL, Claude API, Docker, GCP*

- Built and deployed a job discovery platform on GCP monitoring 12,000+ company career boards across 8 hiring platforms, ingesting 736K+ postings with duplicate detection and job-change tracking
- Built a Claude-powered job-matching pipeline with automated eligibility filtering ahead of the AI step, cutting LLM calls by 97.8%
- Raised PostgreSQL throughput in production-replica benchmarks by comparing postings in bounded batches, skipping unchanged board snapshots, and writing only postings that changed

Bilimly.ai – AI Language Learning Platform | Live | GitHub | *React, TypeScript, Spring Boot, PostgreSQL, Redis*

- Launched a multilingual AI language-learning platform serving 300+ daily active users, integrating Claude-powered tutoring and personalized language exercises using React and Spring Boot
- Implemented JWT authentication, role-based access control, Redis caching, and API rate limiting in Spring Boot

Eltunnel – HTTP Tunneling Tool | GitHub | *Go, Python, WebSockets, HTTP, Linux*

- Built a self-hosted HTTP tunneling service using a Go server and Python client, exposing local applications through public URLs over persistent WebSocket connections and a custom request/response protocol
- Handled concurrent requests with Go goroutines and channels, implementing request-ID correlation and thread-safe routing to correctly match responses across simultaneous connections

Leadership

Community Lead July 2026 – Present
Google Developer Groups on Campus, University of South Florida

- Organize hackathons for 200+ students, coordinating event planning and logistics while explaining technical concepts to participants across experience levels
